

Protect Your Vaccines – Protect Your Patients

- Vaccines must be maintained at temperatures between +2°C and +8°C.
- Monitor and document current, maximum and minimum refrigerator temperatures twice daily (including the time the temperature was taken).
- Call your public health unit immediately to report any vaccines that have been exposed to temperatures below +2°C and/or above +8°C.
- Never administer or discard exposed vaccine until your public health unit has assessed the situation.

Public health unit:

* See the Vaccine Storage and Handling Guidelines for more information.
