Risk factors for the development of active tuberculosis among people with a positive tuberculin skin test (presumed infected with <i>Mycobacterium tuberculosis</i>)	
Level of Risk	Risk factors for the development of active TB for persons infected with LTBI
HIGH RISK	AIDS HIV Transplantation (related to immunosuppressant therapy) Silicosis Chronic renal failure requiring hemodialysis Carcinoma of the head and neck Recent TB infection (≤ 2 years) Abnormal chest x-ray – fibronodular disease
INCREASED RISK	Tumor necrosis factor (TNF) – alpha inhibitors Diabetes mellitus (all types) Treatment with glucocorticoids (≥ 15 mg prednisone) Young age when infected (0-4 years)
